

How to create a print-ready file for Instagram Frame

The following information will guide you to create a print-ready file for Instagram Frame. If you still have any questions, please contact us.

1 FILE FORMAT

Our preferred file format is **PDF** in **1:1 scale** and **not password protected**.

We accept also other formats like **PSD, AI, INDD, TIFF, TIF, PNG, JPG**.

2 FILE ORIENTATION

The orientation of the pages in the PDF (File) must match the orientation of the final product, which is **Portrait**.

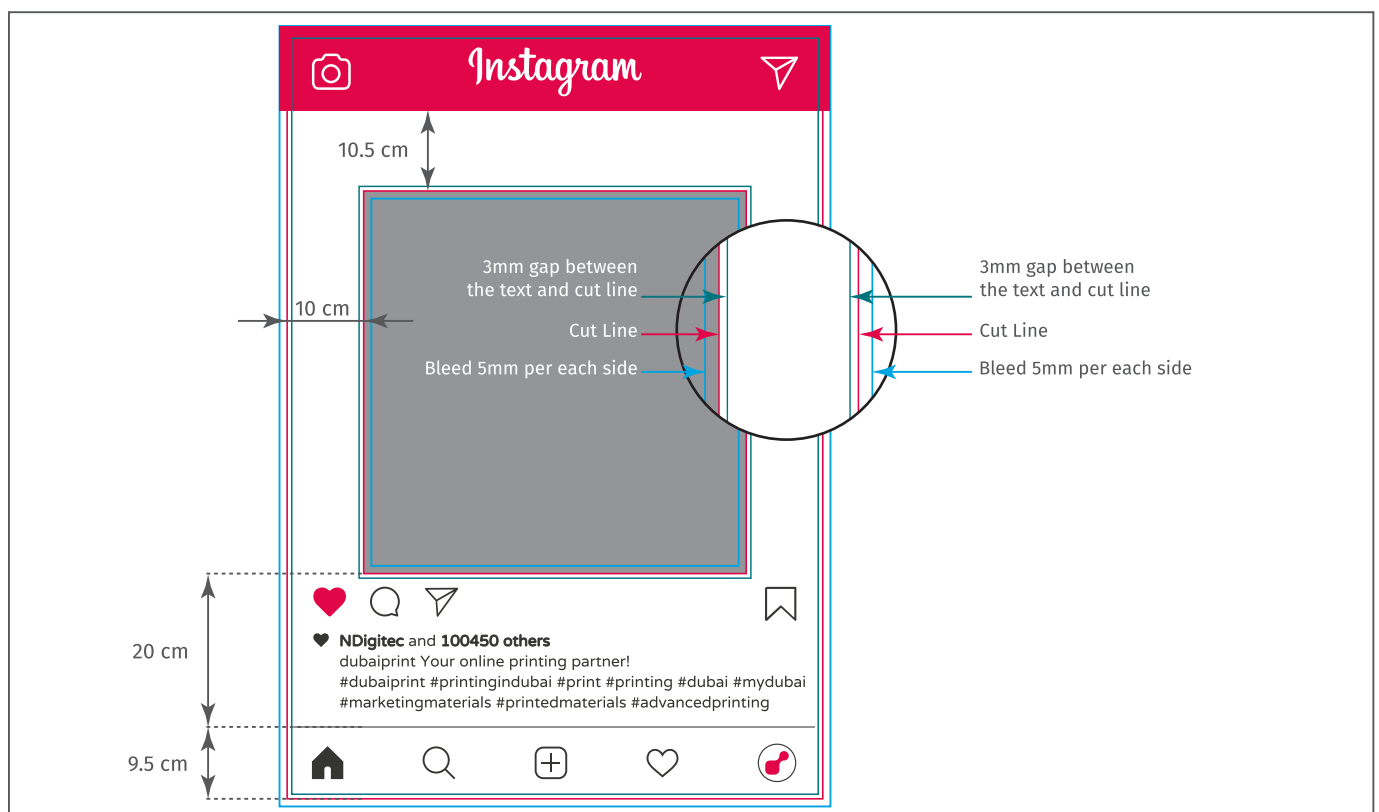

3 TEMPLATE

You can download **the template** from the product page itself and use it as the basis for positioning your artwork. Don't forget to **delete all the guidelines** except the bleed line before saving the file. Crop marks are not required too.

4 MARGINS & BLEEDS

When you download the template, you will find out that **the required bleed for this product is 5 mm**.

Content (text, logos, graphics) must be placed within the **safe area**, which is **3 mm from the cut line**.

5 RESOLUTION

The optimal resolution for this product is **300 dpi**.

6 COLORS

All files should be sent in **CMYK**. Any files in RGB or Pantone colors **will be converted**.

7 FONTS & LINKS

Links are recommended to be **embedded** in the PDF (File), while the fonts should be **converted into curves** or **created as outlines**.
